

Presenter: Zdenek Dolezal, Charles University Prague

Title: SiLC R&D: design, present status and perspectives

Authors: SiLC collaboration

The basic design characteristics and present status of proposed silicon tracker for ILC will be described. Design and results on sensors R&D, front-end ASICs, on mechanical developments on ladder prototypes, large support structures, cooling alignment and integration will be shown. The detailed test beam schedule and roadmap including prototypes and combined tests with other sub-detectors will be presented.
