Outriggers: What needs to be done?

- Reconstruction software

  - **Core Fitting** – **Done?**

  - **Angle Fitting** – See my memo & tomorrow's talk

  - **Energy Estimate** – Need for full detector (Several people have a start)

  - **Gamma/Hadron Separation** - Using outrigger hits and improved core position.

- Monitoring Software

  - Make sure outrigger pmts are monitored as fully as pond pmts

    - mean Tchi's, etc., as we use them more fully

  - Also need software to somehow monitor water quality of outriggers

    - Monitor median Pes versus time?
